

SMT Splice Tape Series

The Splice Tape is used for various industry, for all kinds of carrier tape.
A fast, precise way to connect SMT component reels.

Increase Pick & Place Machine output by 5%-30%

Use all components on the carrier tape

Reduce reel change downtime

Decrease abrasion by reducing the need to reload the feeder

Our wide range of products are compatible with feeders from: Universal, Siemens, Panasonic, Juki, Fuji, Sony, Europlacer, Assembleon, Mydata, I-Pulse, Tenryu, Yamaha, Dima, Philips, Manncorp, Muhlbauer, Smttech/Quad/Tyco, Samsung and most other brands.

It has good viscosity, weatherability and ultrathin characters.

Products advantage:

Easy operating ,and saving labours

High accuracy & reliability

Low cost , high return

The glossy black ESD safe tape version is our preferred stock item. ESD coating with a surface resistance 108Ohm. All SMT splice tape are made of 25my PET film, with a total thickness of 53my with adhesive layer included. As option 38my total thickness can be manufactured on request.

Our wide range of products are compatible with feeders from Universal, Siemens, Panasonic, Juki, Fuji, Sony, Europlacer, Assembleon, Mydata, I-pulse, Tenryu, Yamaha, Dima, Philips, Manncorp, Muhlbauer, SMTech/Quad/Tyco, Samsung and most other brands.

Note all colors: yellow, light yellow, blue, matt-black(ESD), bright- black(ESD), green(ESD).

RED TEXT STOCKED ITEM ALL OTHER WEEKS OF DELIVERY

GLOSSY ESD-SAFE

The black tape was already in the early days the base material for the 13-series Panasonic tape, a special tape developed for tape feeders with a splice detector.

The splice detector requires a matt black finish to see the splice joint. The black tape has an ESD coating with surface resistance 10(6) - 10(8) Ohm

You can get all tape families in black ESD material. The standard is glossy black, except for Panasonic type tape who are made in matt finish.

However, it is possible to manufacture all tapes in matt black if you have special requirements.

Packing: 500pcs/box

The double tape is mainly used for paper carriers. The tape can also be used on plastic carriers. However, the plastic carriers have to be tested to see if the combination of the carrier's structure, the splice tape and the SMT machine can work together. An advantage in using the double tape is that there is no need for metal clips. Without the need for clips and hand tools, the splicing goes faster.

The raised dots on the clear splice tape carrier engage with the sprocket holes in the SMD tape. Double Splice Tape is used to splice 8mm to 24 mm SMD carrier tapes and is available in the colors yellow, blue, black and green. The 8 mm width is also available with a 45 degree beveled that minimizes the risk for peeling model (picture)LX. The double tape works for most component feeders and machines.

Splice Tapes are available in all the dimensions for the carrier tapes

Double splice tapes with [Alignment GUIDE](#) Offers a fool proof reference for Splicing joints. The guide makes it easier to align the splice tape on the SMD carrier tape.

With precise pitch spacing and pre-cut length of the tape, the process of splice is accomplished with Out any special tools.

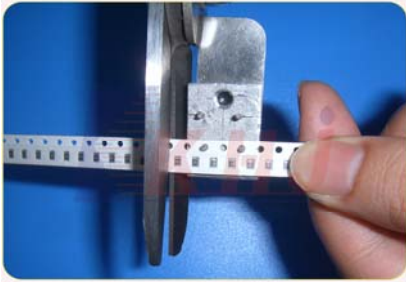

[Splice Tapes are available in all the dimensions for the carrier tapes](#)

SMT Double Splice Tape 01 Series

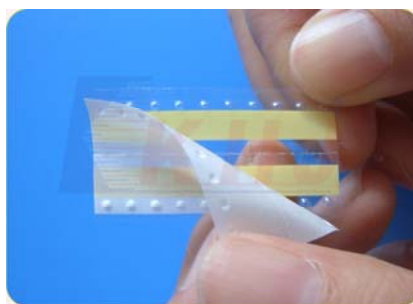

Feature:

Double splice tapes guarantee perfect and reliable joints in all kinds of paper carrier tape. Joining is accomplished without any tools or fixtures, with precise pitch spacing, using convenient, pre-cut lengths of tape.

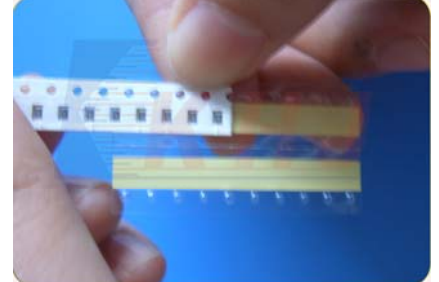

Demo.(SMS-0108)

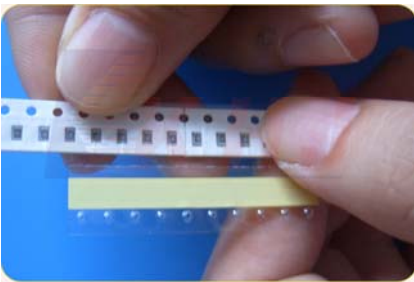

Step 1: Put carrier tape into placement pin of cutter and cut the tape.

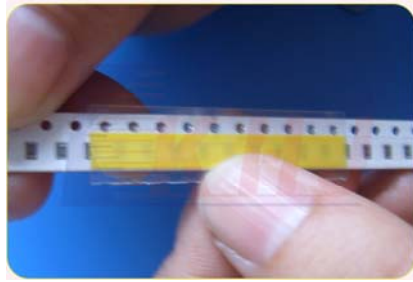

Step 2: Peel off the paper liner.

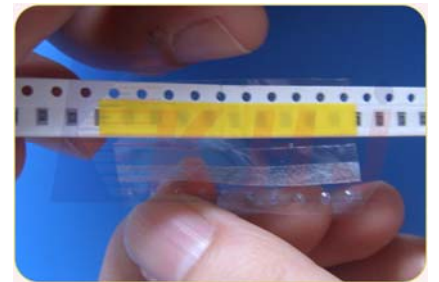

Step 3: The raised dots of the clear plastic carrier engage with the sprocket holes.

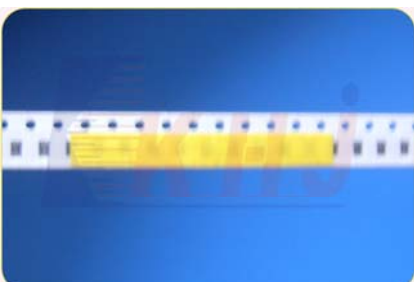

Step 4: Stick another pre-cut reel.

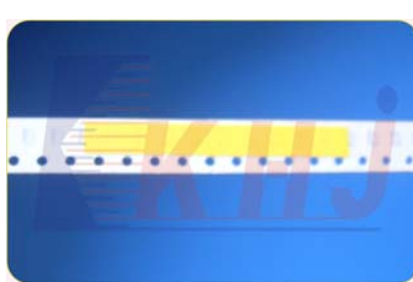

Step 5: Fold splice tape over connected tape.

Step 6: Peel off the plastic liner.

Demo.: Upside of connected tape

Demo.: Downside of connected tape.

This tape is used to splice the cover tape. The single SMT splice tapes are used for both paper and plastic carrier tapes. These tape carriers are normally used with a splice clip made of brass

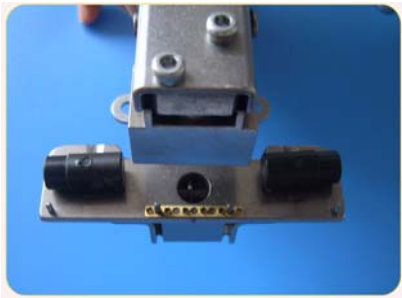

We offer tape from 8 to 56 mm (width) and available colors are yellow, blue, glossy black and green (transparent).

Splice Tapes are available in all the dimensions for the carrier tapes

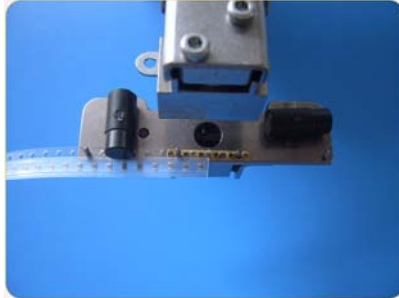

SMT Single Splice Tape 03 Series

Feature:

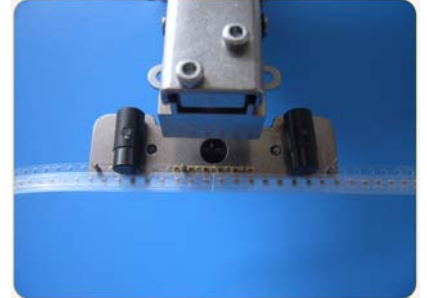

Both for paper & plastic carrier tape, following items are proved to be effective and reliable at the lowest cost.

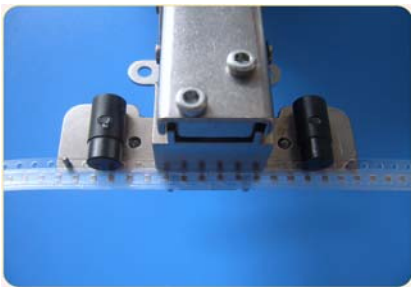

Step 1: Put Splice Clip into splice tool.

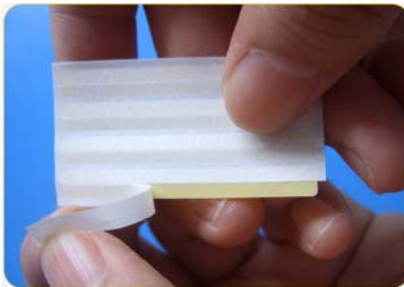

Step 2: Put one pre-cut reel into splice tool.

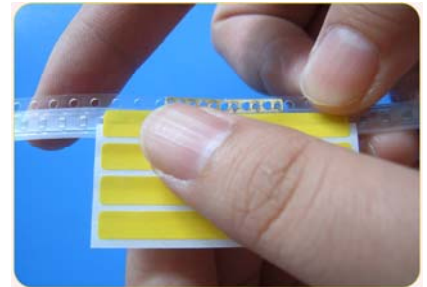

Step 3: Put another pre-cut reel into splice tool.

Step 4: Clench the splice tool.

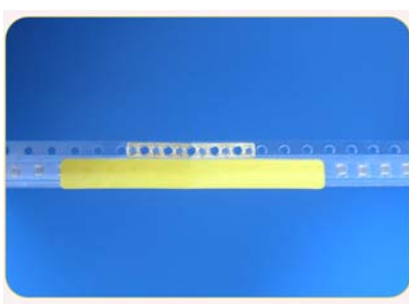

Step 5: Peel off the paper liner.

Step 6: Black strip in line with the edge of the reel to stick splice tape.

Step 7: Peel off the paper liner

Demo.: Upside of connected tape.

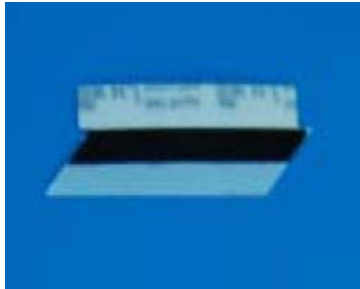

Demo.: Downside of connected tape.

-CLIP SMS0600
-High reliability for big carrier tape

SMS-17 series Single splice tape with "Alignment Guide" proved to be effective and reliable at low cost for both Paper and Plastic carrier tapes. This offers a fool proof reference for Splicing joints.

The 8 mm tape is available with a guide. The guide makes it easier to align the splice tape on the SMD carrier tape. The 8 mm tape has a special feature with ends that are cut in a 45 degree angle. This reduces the risk for jams in the component feeder.

The clip SMS0600 is used by Splice tool SMS-T for joining the splice tapes. Get high reliability when using wider carrier tape.

Splice Tapes are available in all the dimensions for the carrier tapes

SMT Single Splice Tape 17 Series

Feature:

Both for paper & plastic carrier tape, following items are proved to be effective and reliable at the low cost. When align two carrier tapes with our reference line, splice tape will be no deviation over the connected tape.

Demo (SMS-1708)

Packing: 500pcs/box

08 Series is an innovative design consisting of a single clip and splice tape as an integrated part (COMBO).

The splice tape and metal clip are connected with a carrier. This makes it easier to use clips and tape:

- It is easier to place the metal clips in the tool.
- It is easier to align the tape, which gives you more control of the tape.
- The process of splicing using this product is operator convenient and provides accurate and reliable splice joint.

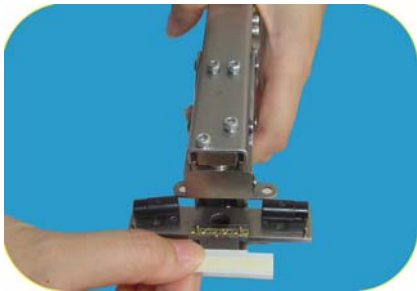

Clip & Splice Tape 08 Series

Features:

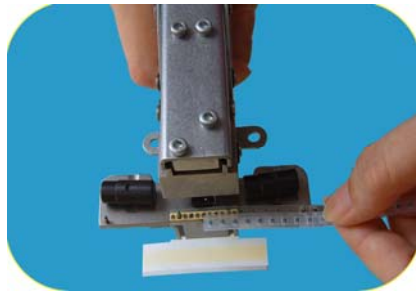

1. Innovative design: A Clip and a Single Splice Tape in one strip.
2. Easy to use, Labor-saving.
3. Accurate and reliable connection.

Both for paper & plastic carrier tape, it is proved to be a reliable and accurate connecting with our SMT

SMS-0808 Demo

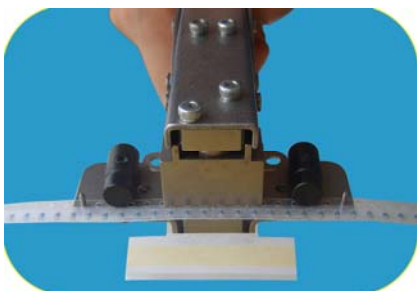

Step 1: Put SMT Clip & Splice into SMT Splice tool.

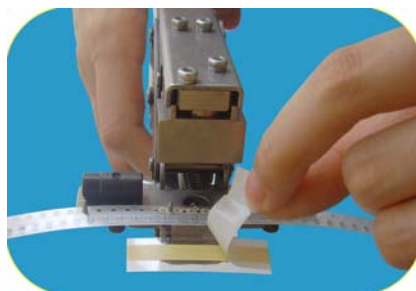

Step 2: Put pre-cut reel into the splice tool by the center of clip & splice.

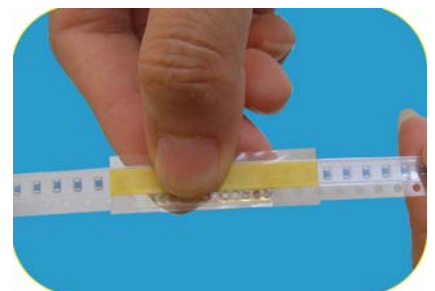

Step 3: Put another pre-cut reel into splice tool.

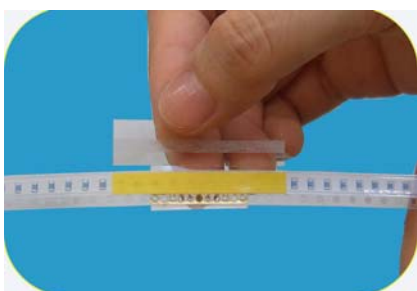

Step 4: Clench the Splice Tool.

Step 5: Take off the paper part of Clip & Splice.

Step 6: Fold down the splice on the connecting reel.

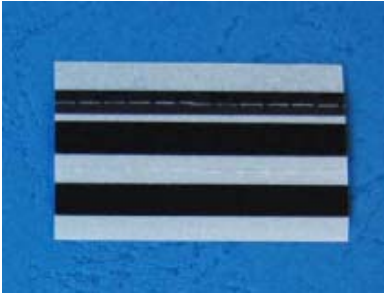

Step 7: Take off the plastic part of Clip & Splice and then discard

Demonstration: Downside of the connecting reel.

SMT Clip & Splice Tape 15 series

Features:

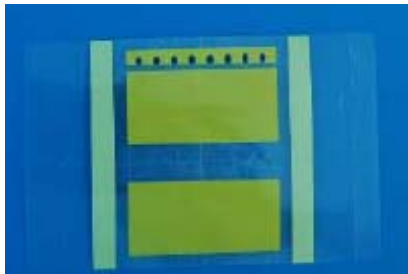

SMS 15-series has EIGHT-HOLE alignment tape for the proper placement of splice tape in between the two carrier tapee. This provides coverage of splice tapes equally on both carrier tapes at splicing joint.

SMT Clip&Splice Tape
P/N: SMS1508
Packing: 500pcs/box

SMT Clip&Splice Tape
P/N: SMS1512N
Packing: 500pcs/box

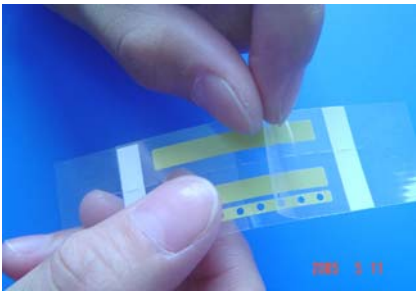

SMT Clip&Splice Tape
P/N: SMS1516N
Packing: 500pcs/box

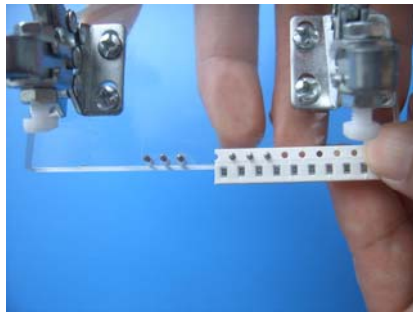

SMT Clip&Splice Tape
P/N: SMS1524
Packing: 250pcs/box

Features:

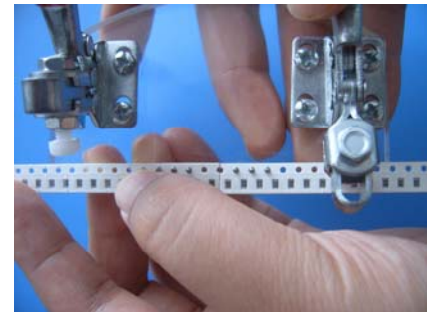

SMS 15-series has EIGHT-HOLE alignment tape for the proper placement of splice tape in between the two carrier tapee. This provides coverage of splicee tapes equally on both carrier tapes at splicing joint.

Demo (SMS-1508)

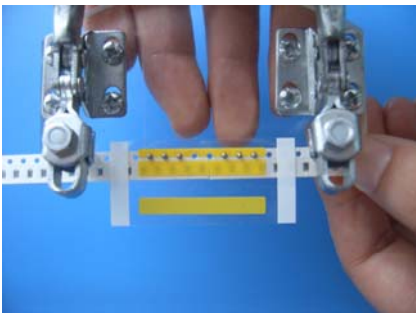

Step 1. Tear off plastic part of the splice tape with hole.

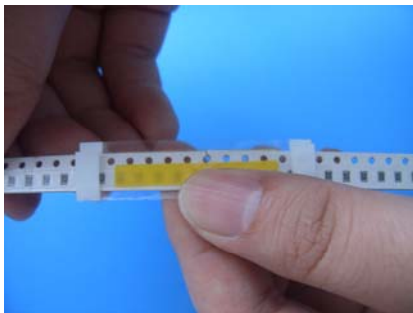

Step 2. Put pre-cut reel into the orientation clamp.

Step 3. Put another pre-cut reel into the orientation clamp.

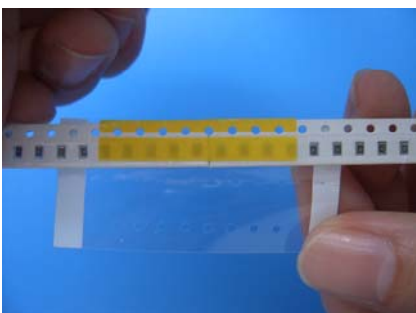

Step 4. Put the splice tape with hole into the pre-cut reel.

Step 5. Fold down the splice on the connecting reel.

Step 6. Press the splice tape with hole in the connecting reel tightly.

Step 7. Take off the plastic part of the splice tape with hole and then discard.

Demonstration: Upside of connecting reel.

SMS 13 Series splice tapes are specially designed for Panasonic CM402 machined equipped with Pro Line-Road Runner enable feeders.

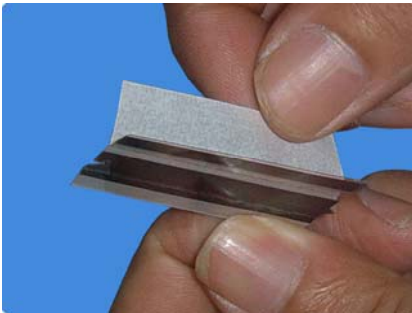

The sensor in the feeder records the splice joints and the time of component replenished.

Matt black colour tape is essential for realizing this function.

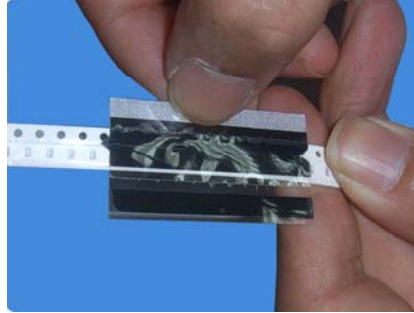

SMS 13 series splice tapes are Matt black colour which is proved to be effective and reliable for this machine.

Splice Tapes are available in all the dimensions for the carrier tapes

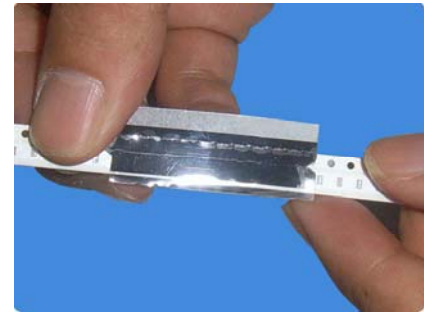

Demo (SMS-1308)

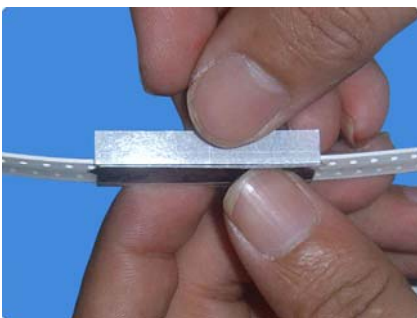

Step 1: Tear off the paper liner.

Step 1: Put the edge of guidance strip in line with the hole side of carrier tape.

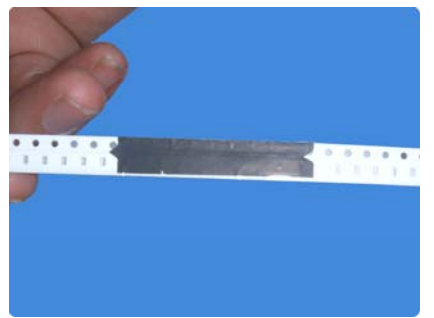

Step 2: Fold down the splice tape.

Step 3: Tear off guidance strip.

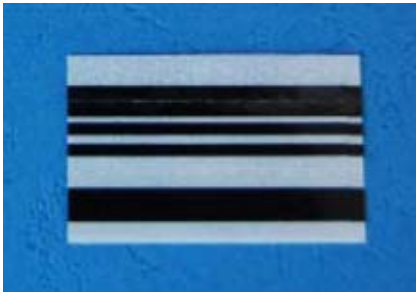

Step 4: fold down the splice tape.

Step 5: Upside of connected carrier tape.

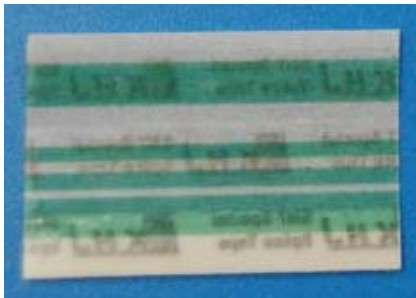

Step 6: Downside of connected carrier tape.

Packing: 500pcs/box

Due to the special configuration of some kinds of feeders, if two carrier tapes are connected by standard splice tape, spliced carrier tape are more likely to be jammed due to thickness variation when splice tape is passing through these feeders. Hence a gap of 1 mm is maintained to keep the original thickness of the cover tape .

This tape is an improvement of the standard double splice tape. The four-fold structure results in a strong and flexible splice joint that allows inspection of the components.

The 2 first strips of tape splice the cover tape on each side of the component pockets. The 3rd strip splices folds around the carrier on the sprocket hole side. By allowing the sprocket holes to be covered, the splice joint becomes very strong.

The tape is easily punctured by the sprocket wheel in most feeders. The 4th strip is placed on the reverse side of the carrier. The tape strips comes on a plastic carrier with a edge guide, making the alignment quick and easy.

SMS 19 Series tapes are specially designed for Universal, Juki, Sanyo machine feeders. 4 strips of splice tapes with a reference guide provides more strength at splicing joint and will avoid breaking under peel off tension.

Splice tapes are available in all the colours

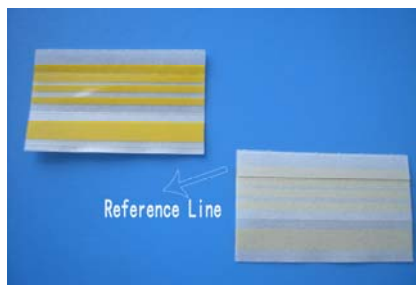

Item	Description	Color	Packing (pcs/box)	Remark

SMT Special Splice Tape 25 Series

Application: Serving for SAMSUNG SMT machines and the new Hitachi machine.

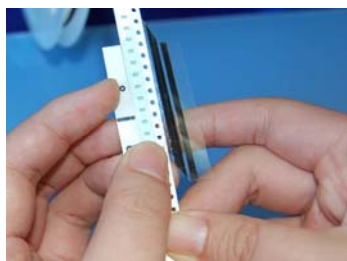

The bevel 45 angular edge profile of tapes prevents any possibility of tape jam under cover tape assembly of the feeder while passing through.

Advantage:

Using the tape in high strength, high adhesive and Anti-static, which protect better for component; Operate easily, labor saving.

SMT Cover Tape Extender Series

Minimize Component Waste

SMD cover tape extenders have been developed to enable pick and place machine users to use component tapes in full reels or short sections, without any available leader, and not waste a single component. The tape extender gives you 400 or 400 mm of non-adhesive film to start through the tape feeder.

Use of Extenders

Removing the cover paper reveals the adhesive side of the yellow tape, whose mark is aligned with the front edge of the component tape and stuck unto its cover tape. The non-adhesive, transparent end of the polyester foil strip can now be fed into the tape feeder. There is enough length available not to have to discard components in the process. The bond between the tape extender and the original cover tape is sufficient to ensure that they will not separate, even after prolonged time under tension. Four widths and four colours are available.

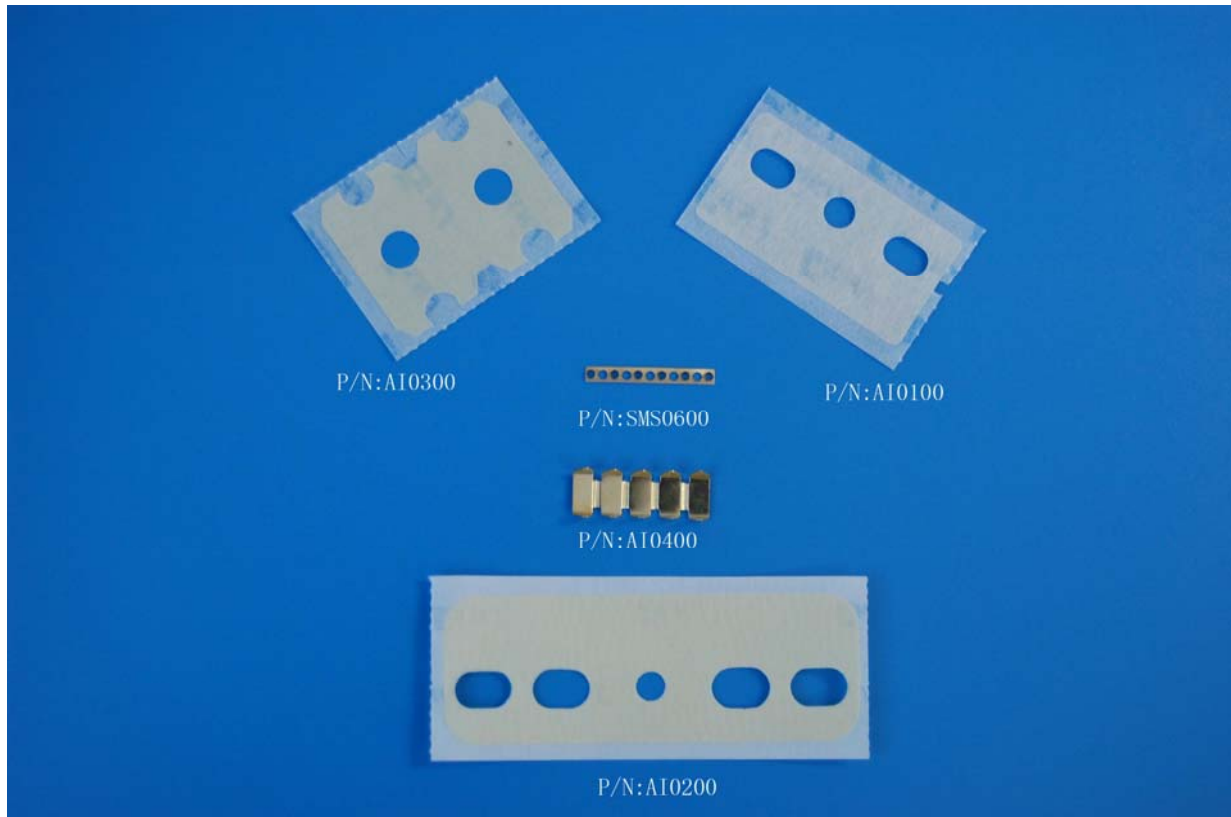

Cost Efficient

The cost for a tape extender is a fraction of the cost of lost components! Lost components on the floor or in the machine is a quality, safety and environmental hazard. A cover tape extender is the simple solution. Available in 396mm and 500 mm lengths.

Splice Tapes are available in all the dimensions for the carrier tapes
